The state is requiring ground water monitoring. They are still awaiting initial sample results from monitoring wells at the site. My understanding is that area residents should not be using the ground water for drinking water because of other historical concerns but as we were told Friday, NDEE couldn't say with certainty that no one is.

Regarding surface water monitoring, NDEE was advised a year ago, and it has been re-emphasized at different points, that surface water runoff could be a concern. I do not know if NDEE has conducted additional surface water monitoring.
